

After Effects of the Bombing of Hiroshima & Nagasaki

A Seminar on **After Effects of the Bombing of Hiroshima & Nagasaki** on 9-08-2017.

Participants:

A total number of 70 students and teaching staff.

Resource person:

Aika. Balaji, Mundadugu Organization, **Calcutta.**

Description of the programme:

The resource person showed the clippings and videos related to industrialisation and after effects of Bombing. He advised that the students should follow the current events and should know the reasons for the disturbances of the country which lead to war. The detonation of atomic bombs over the cities of Hiroshima and Nagasaki of Japan in August 1945 resulted in terrific destruction. The long term effects of radiation increases and leads to increase in the rate of cancer in the survivors. These incidents also lead to the congenital defects and high rates of genetic diseases among the survivors. He also said that the average life span of survivors is also reduced by these atomic wars.

“War does not determine who is right – only who is left” -Russel
